

# ULTRAZVUKOVÝ SPÍNAČ HLADINY ECHOTEL® 910

Echotel® 910 is an integral mounted ultrasonic tip sensitive level switch with integrated DPDT relay. The Echotel® 910 is ideally suited for pump protection (also for vacuum), overflow prevention, high or low level alarm in clean liquid applications with or without foam.

## FEATURES

- \* Does not require any calibration.
- \* Dual electrical entries and various housings are standard available.
- \* A built-in averaging circuit ensures no false alarms due to most effervescence or turbulences.
- \* Actuation is determined by the length of the transducer and is available in lengths between 3 cm (1.20") and 254 cm (100").
- \* All materials exposed to process in 316/316L SST (1.4401/1.4404).
- \* Field selectable high/low level failsafe.

## APPLICATIONS

- LIQUIDS: Any clean liquids.
- VESSELS: Any mounting position.
- PROCESS CONDITIONS: Unaffected by
  - shifting dielectric, density, or PH
  - presence of foam, turbulence, visible vapors
  - fast drain/fill rates
  - transducer coating and air bubbles
  - vacuum conditions.

## Rugged and cost effective

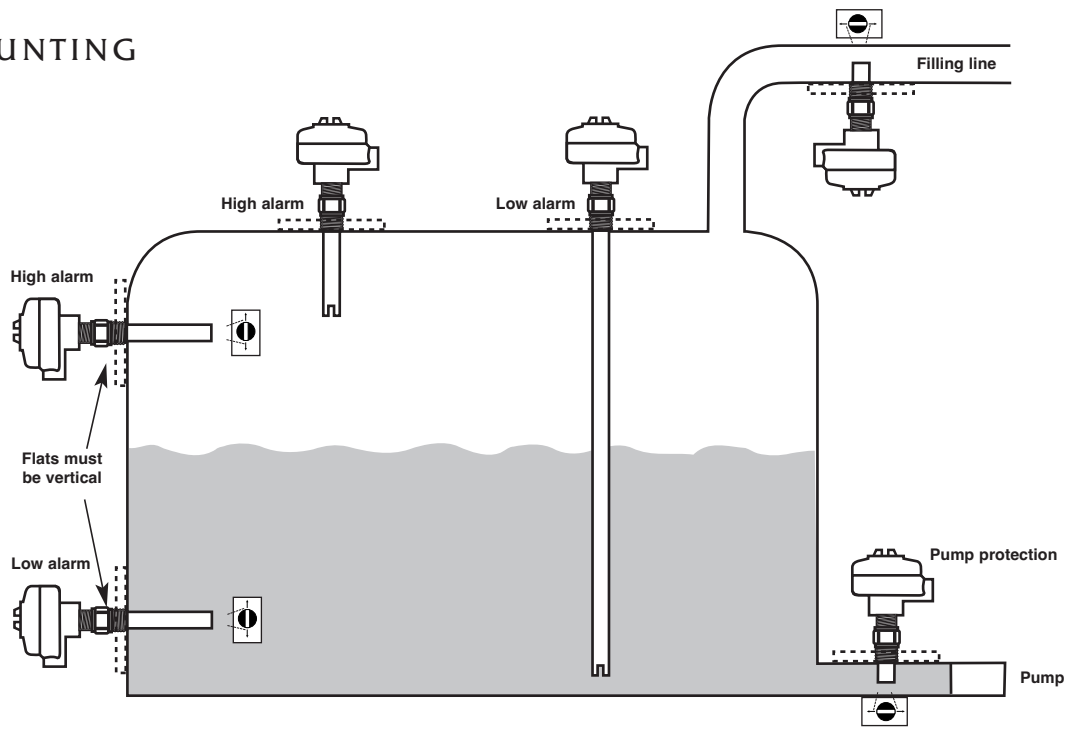

## PRINCIPLE OF OPERATION

The Echotel® 910 operates on a two crystal "transmit-receive" principle. The signal is converted into ultrasonic energy and transmitted across the sensing gap toward the receiver crystal. When there is air in the gap, the high frequency ultrasonic energy will not be received. When there is liquid in the gap, the ultrasonic energy will propagate across the gap and actuate the relay.
