

Stainless steel-submersible drainage pump
with cooling jacket
for clear and domestic drainage water.

CR253

Application

Irrigation and drainage assignments in clean or dirty water. Cellar draining, keeping trenches, shafts and rooms dry. Domestic waste water disposal in cellar rooms (e.g. washbasins, showers, washing machines). Reduction of surface water. Emergency deployment for flooding. Water extraction from water-courses or reservoirs for irrigation. A cooling jacket with discharge connector at the top ensures sufficient motor cooling even at low water level (sip operation).

DIN EN 12050-2: Design tested and monitored.

Installation: Stationary or mobile. Version with float switch for use as automatic water level controlled drainage pump. Guided float switch, adjustable switch level. Attachable low suction ring for low suction pumping.

Pumped medium: Clear- or drainage water containing solids up to 10 mm particle size. Max. temperature of pumped medium: 35°C, for brief periods up to 60°C.

Operating mode: Intermittent operation.

Design

Submersible pump, consisting of:

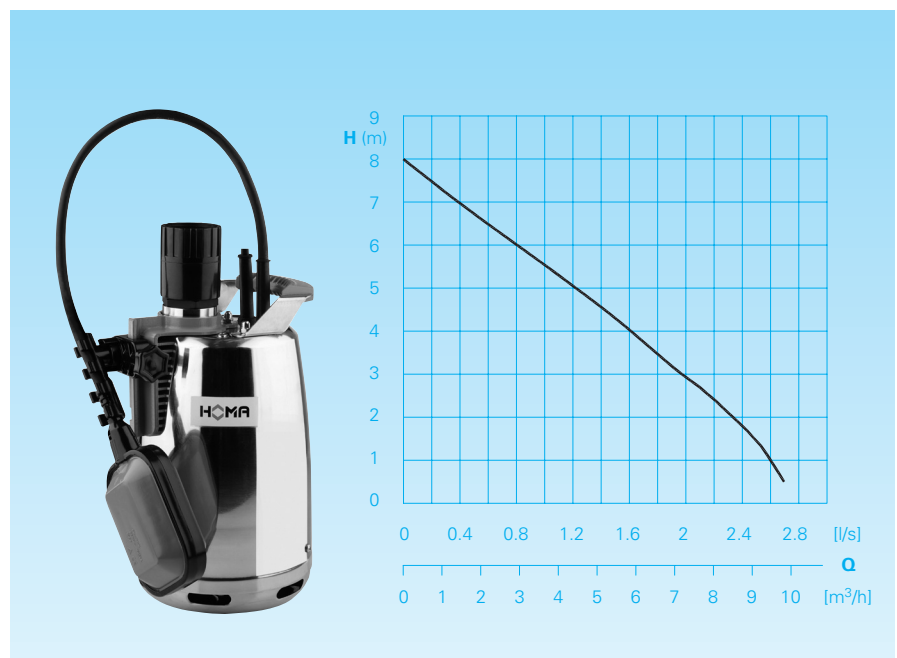

Pump: Single-stage stainless steel centrifugal pump with cooling jacket and vertical discharge.

Impeller: Open multi-blade impeller, free passage 10 mm.

Motor: Single-phase electric motor. Thermal sensor for temperature monitoring in the winding. Insulation class F. Protection rating IPX 8. Stainless steel motor shaft with ceramic coated sealing surface, pre-lubricated bearings.

Shaft seal: 3 shaft sealing rings.
