Structure and Features

Balls roll in two rows of raceways precision-ground on an LM rail and an LM block, and endplates incorporated in the LM block allow the balls to circulate.
Despite being compact, the product's ball contact structure is capable of receiving loads in all directions, and it can be used individually in locations with space limitations or where moments are applied.
The high temperature type miniature LM Guide Model RSX-M1 is capable of being used at service temperatures up to 150℃ thanks to THK's unique technologies in material, heat treatment, and lubrication.

[Maximum Service Temperature: 150℃]
Use of stainless steel in the endplates and high temperature rubber in the end seals achieves the maximum service temperature of 150℃.

[Dimensional Stability]
Since it is dimensionally stabilized, it demonstrates superb dimensional stability after being heated or cooled (note that it shows linear expansion at high temperature).

[Highly Corrosion Resistant]
Since the LM block, LM rail, and balls use stainless steel, which is highly corrosion resistant, this model is optimal for clean room applications.

[High Temperature Grease]
This model uses high temperature grease that shows little grease-based fluctuation in rolling resistance even if the temperature changes from low to high levels.

Thermal Characteristics of LM Rail and LM Block Materials

- Specific heat capacity: 0.481 J/(g•K)
- Thermal conductivity: 20.67 W/(m•K)
- Average coefficient of linear expansion: 11.8×10^{-6}/℃

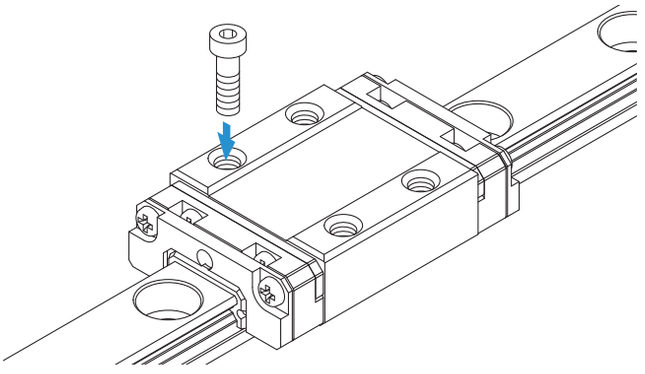
Types and Features

Model RSX-M1

Specification Table⇒A1-384

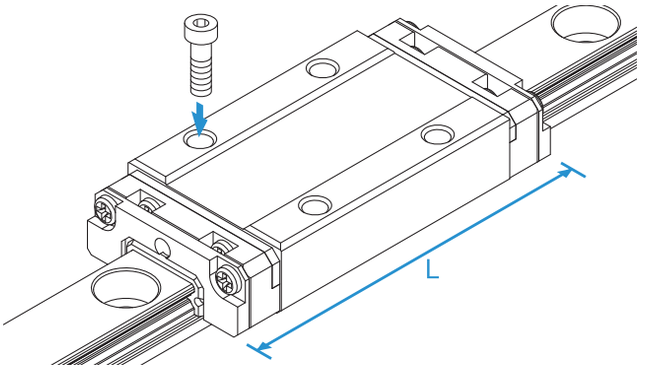
This model is a standard type.



Model RSX-M1N

Specification Table⇒A1-384

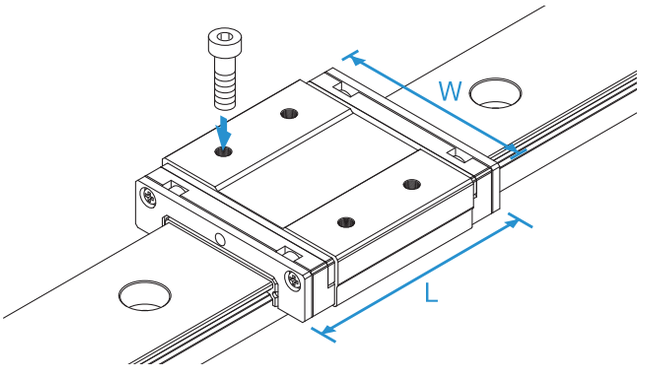
This type has a longer overall LM block length (L) and a higher load rating than the Model RSX-M1.



Model RSX-M1W

Specification Table⇒A1-386

This type has a longer overall LM block length (L), a greater width, and a larger rated load and permissible moment than the Model RSX-M1.



Model RSX-M1WN

Specification Table⇒A1-386

This type has a longer overall LM block length (L) and a higher load rating than the Model RSX-M1W.

Service Life

When using this product in temperatures higher than 100°C, always multiply the basic dynamic load rating by the temperature coefficient when calculating the rated service life. See A1-66 for details.

Note1) The maximum length under "Length*" indicates the standard maximum length of an LM rail. (See **A1-388**.)
Static permissible moment* 1 block: the static permissible moment with one LM block
2 blocks: static permissible moment when two LM blocks are in close contact with each other
Total block length L The total block length L shown in the table is the length with the dust-proof parts (code: UU).
Please be aware that balls will fall out if the LM block is removed from the LM rail.
Note2) The basic load rating in the dimension table is for a load in the radial direction. Use Table7 on **A1-60** to calculate the load rating for loads in the reverse radial direction or lateral direction.
