HLADINOVÝ SPÍNAČ S TANDEM PLVÁKY T20/T21

DESCRIPTION

T20 and T21 units are simple, reliable float switches designed for top mounting into tanks or vessels. T20 units utilize a single switch mechanism and float. T21 units utilize two switch mechanisms and two separate floats when widely spaced actuating levels are required. T20 and T21 models are available for any type of open or closed vessel with either threaded or flanged type mounting and actuating depths up to 1219 mm (48 inches).

FEATURES

- Carbon or stainless steel process connection materials (other materials available at request)
- Flanged and threaded process connections
- Wide choice of housings and switch mechanisms
- Process temperature up to 540 °C (1000 °F)
- Up to 2 switch levels (T21)
- Specific gravity as low as 0,60
- Process pressure up to 41,3 bar (600 psi)
- Standard anti corrosive protection
- Custom calibrated

APPLICATIONS

- Day Tanks
- Condensate Receivers
- Fuel Storage Tanks
- Cooling Towers
- Flash Tanks
- Interface
- High and high/high alarm from single tank entry

Float level switches for single or dual level alarm

PRINCIPLE OF OPERATION

A permanent magnet ① is attached to a pivoted switch actuator and adjustment screw ②. As the float ③ rises following the liquid level, it raises the attraction sleeve ④ into the field of the magnet, which then snaps against the non-magnetic enclosing tube ⑤, actuating the switch ⑥. The enclosing tube provides a static pressure boundary between the switch mechanism and the process. On a falling level, an inconel spring retracts the magnet, deactivating the switch.

MOUNTING

T20 – SINGLE SWITCH MODEL

Level alarm applications
Narrow differential type

These instruments are factory calibrated to operate over a narrow level differential band and are ideally suited for liquid level alarm applications, on either high or low level.

T21 – DUAL SWITCH MODEL

Level alarm applications
Narrow differential type

T21 tandem models combine the functions of two separate narrow differential level controls in a single, compact, easy to install instrument. Two individual switch mechanisms are employed to provide two actuating levels at least 203 mm (8") apart. These instruments are ideally used in applications requiring two separate switching points, such as high and low level alarm operation.
