# RADAROVÝ HLADINOMĚR ECLIPSE® 705

## DESCRIPTION

The Eclipse 705 Transmitter is a loop-powered, 24 V DC liquid-level transmitter based on the revolutionary Guided Wave Radar (GWR) technology. Encompassing a number of significant engineering accomplishments, this leading edge level transmitter is designed to provide measurement performance well beyond that of many traditional technologies, as well as "through-air" radars.

The innovative enclosure is a first in the industry, orienting dual compartments (wiring and electronics) in the same plane, and angled to maximize ease of wiring, configuration, set-up and data display.

This single transmitter can be used with all probe types and offers enhanced reliability, for use in SIL 2 / SIL 3 loops.

## FEATURES

- \* "REAL LEVEL", measurement not affected by media variables eg. dielectrics, pressure, density, pH, viscosity, ...
- \* Easy bench configuration - no need for level simulation.
- \* Two-wire, intrinsically safe loop powered level transmitter.
- \* 20-point custom strapping table for volumetric output.
- \* 360° rotatable housing can be dismantled without depressurising the vessel via "Quick connect/disconnect" probe coupling.
- \* Two-line, 8-character LCD and 3-button keypad.
- \* Probe designs: up to +425 °C / 431 bar (+800 °F / 6250 psi).
- \* Saturated steam applications up to 155 bar @ +345 °C (2250 psi @ +650 °F).
- \* Cryogenic applications down to -196 °C (-320 °F).
- \* Integral or remote electronics.
- \* Suited for SIL 2 / SIL 3 loops (full FMEDA report and certificate available).

## APPLICATIONS

**MEDIA:** Liquids or slurries; hydrocarbons to water-based media (dielectric 1,4 - 100).

**VESSELS:** Most process or storage vessels.

**CONDITIONS:** All level measurement and control applications including process conditions exhibiting visible vapours, foam, surface agitation, bubbling or boiling, high fill/empty rates, low level and varying dielectric media or specific gravity.

Ask for your free copy of the Eclipse® 705 performance report by WIB/Evaluation International (SIREP)/EXERA.

FM/CSA <sup>③</sup>	Ex d[ia] Ga] IIC T6 Gb Ex t[ia] Da] IIIC T85 °C Db IP66 Ex ia IIC T4 Ga, intrinsically safe Ex ia IIC T4 Ga, FISCO - intrinsically safe <sup>②</sup> Ex ic [ia] Ga] IIC T4 Gc Ex nA [ia] Ga] IIC T4 Gc
Russian Authorisation Standards <sup>③</sup>	
Other approvals are available, consult factory for more details	

<sup>①</sup> Probe is intrinsically safe to ATEX II 1 G EEx ia IIC T6 and can be used in zone 0, on flammable liquids.

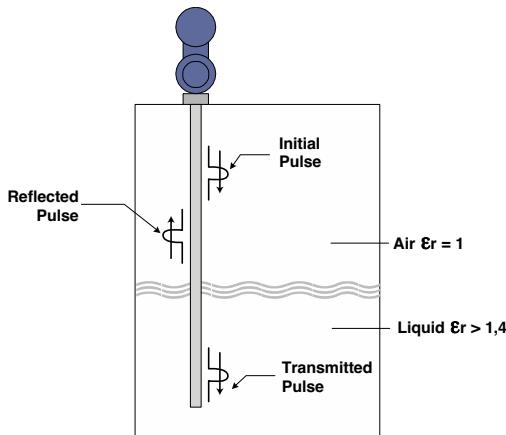

<sup>②</sup> FOUNDATION Fieldbus™ and Profibus PA™ units.

<sup>③</sup> Consult factory for proper model numbers and classifications.

## TECHNOLOGY

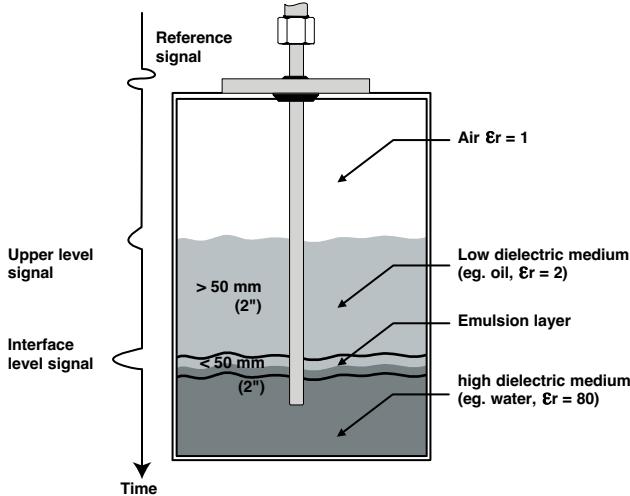

### Level

Eclipse® Guided Wave Radar is based upon the technology of TDR (Time Domain Reflectometry). TDR utilises pulses of electromagnetic energy transmitted down a wave guide (probe). When a pulse reaches a liquid surface that has a higher dielectric constant than the air ( $\epsilon_r$  of 1) in which it is traveling, the pulse is reflected. The travelling time of the pulse is measured via ultra high speed timing circuitry that provides an accurate measure of the liquid level. Even after the pulse is reflected from the upper surface, some of the energy continues down the GWR probe through the upper liquid. The pulse is again reflected when it reaches the higher dielectric lower liquid, as shown in the illustration.

### Interface

The Eclipse® 705, is capable of measuring both an upper liquid level and an interface liquid level. It is required that the upper liquid has a dielectric constant between 1,4 and 5, and the lower liquid has a dielectric constant greater than 15. A typical application would be oil over water, with the upper layer of oil being non-conductive ( $\epsilon_r \pm 2,0$ ), and the lower layer of water being very conductive ( $\epsilon_r \pm 80$ ). The thickness of the upper layer must be  $> 50$  mm (2"). The maximum upper layer is limited to the length of the 7MT GWR probe, which is available in lengths up to 6,1 m (240").

### Emulsion layers

As emulsion layers can decrease the strength of the reflected signal, the Eclipse® 705 should only be utilised in those interface applications that have clean, distinct layers. The Eclipse® 705 will tend to detect the top of the emulsion layer. Contact the factory for application assistance.

## PACTware™ PC SOFTWARE PROGRAM

FDT technology provides an open communication interface between field instruments of various communication protocols and the host/ DCS system. The DTM driver is typical for one type of instrument and delivers the full functionality of the device added with graphical user interface via a laptop or PC. Magnetrol transmitters use the free shareware PACTware™ software to support DTM drivers and the FDT functionality. Via PACTware™ it becomes easy to configure, monitor and diagnose a Magnetrol transmitter from distance or even to call for factory assistance over the internet via the supply of screenshots of echo curves and trending graphs. Magnetrol DTM library HART® has passed the dtmINSPECTOR, the official FDT interoperability test and certification tool. The Magnetrol DTM's are free of charge and can be downloaded from [www.magnetrol.com](http://www.magnetrol.com).

## REPLACEMENT OF DISPLACER TRANSMITTER

Eclipse® has proven to be the perfect replacement for existing torque tube transmitters. In hundreds of applications around the globe, customers have found Eclipse® Guided Wave Radar superior to torque tube transmitters:

- Cost:**

A new Eclipse® costs only slightly more than rebuilding an aging torque tube.

- Installation:**

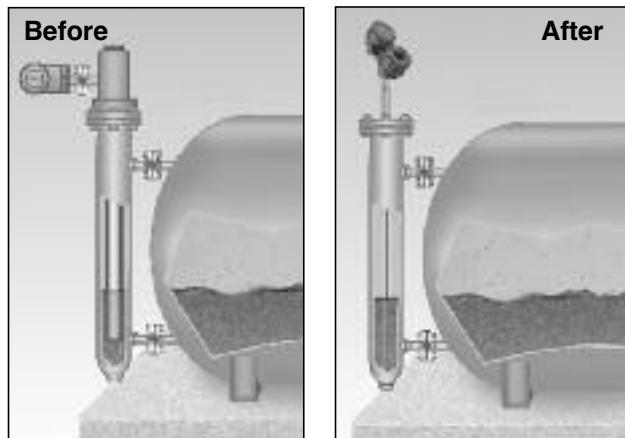

No field calibration is necessary; it can be configured in minutes with no level movement. Pre-configuration from factory is free of charge.

- Performance:**

Eclipse® is not affected by changes in specific gravity or dielectric.

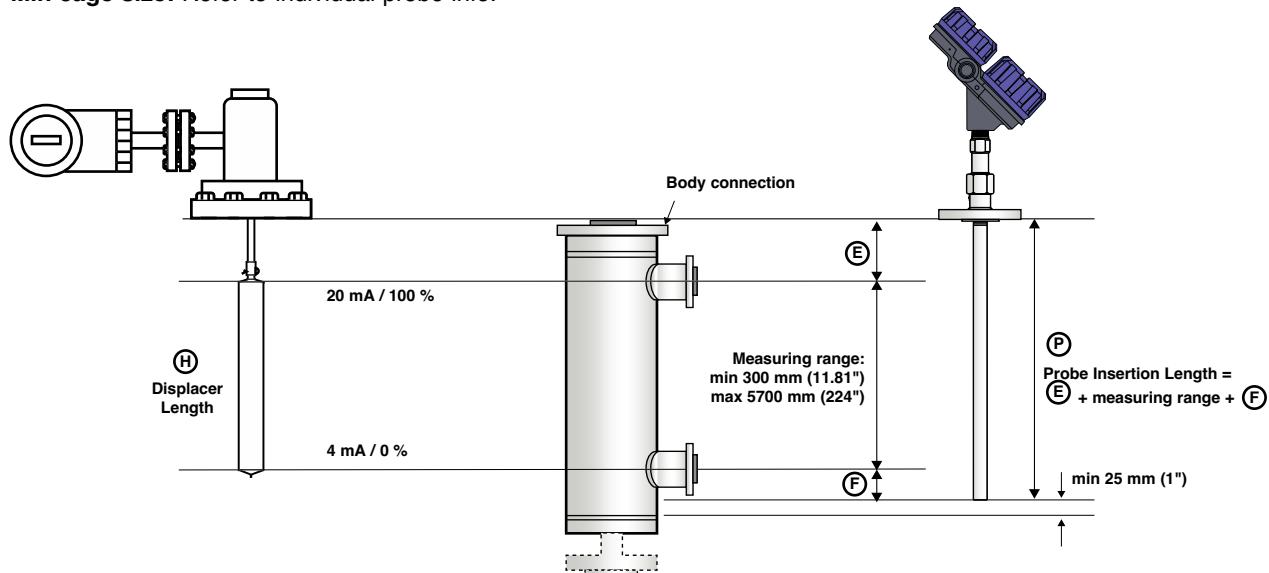

- Ease of replacement:**

Proprietary flanges are offered so existing chamber/cages can be used.

In order to match the proper Eclipse transmitter with the proper external cage, consider the following:

- **Type of application** – use the applicable GWR probe, see selection guide.
- **Overfill proof:** Overfilling occurs when the level rises above the max level – radar based equipment may provide erroneous output in this zone unless an adapted design is used. GWR probes without top transition zone (e.g. 7MD, 7MT) are always safe to use – only in cases where the application demands for a different probe type, other selections should be considered and the recommended precautions followed.
- **Min cage size:** Refer to individual probe info.

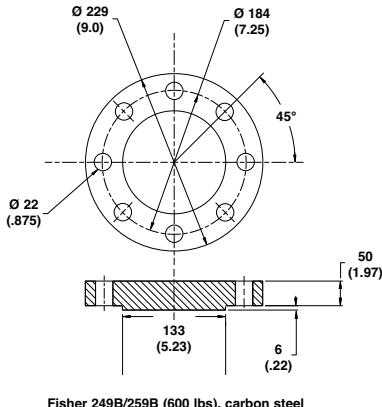

### Indicative probe length for replacing displacer transmitters

Below table helps to define the GWR probe length based upon the length of the most common displacer transmitters. Consult the flange selection guide on the next page.

Manufacturer	Type	Process connection	Displacer length inches (mm)	Probe length <sup>①</sup> mm (inches)
Magnetrol®	EZ & PN Modulevel®	ASME/EN flange	≥ 14" (356)	Displacer + 178 (7)
Masoneilan®	Series 1200	Proprietary flange	≥ 14" (356)	Displacer + 203 (8)
		ASME/EN flange	≥ 16" (406)	Displacer + 203 (8)
Fisher® series 2300 & 2500	249B, 259B, 249C cages	Proprietary flange	≥ 14" (356)	Displacer + 254 (10)
	other cages	ASME flange	≥ 14" (356)	consult factory
Eckhardt®	Series 134,144	ASME/EN flange	≥ 14" (356)	consult factory
Tokyo Keiso®	FST-3000	ASME/EN flange	H = 11.8" (300)	Displacer + 229 (9)
		ASME/EN flange	≥ H = 19.7" (500)	Displacer + 229 (9)

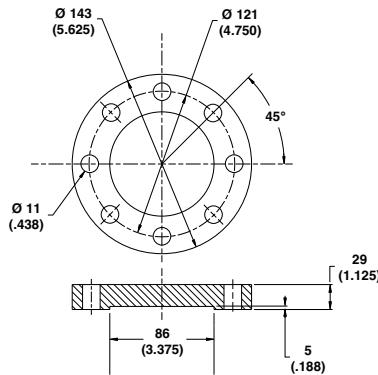

<sup>①</sup> Round down resulting calculation to the nearest cm.

## PROPRIETARY FLANGES

Fisher 249C (600 lbs), 316 stainless steel

**Figure 2**

Masonelan (600 lbs), 316 carbon steel

**Figure 3**

## FLUSHING CONNECTION

The maintenance of coaxial GWR probes in applications suffering from buildup, crystallization or condensation can significantly be improved by using a flushing connection. A flushing connection is a metal extension with a vent, welded above the process connection. Via the vent it is possible to purge the inside of the coaxial GWR probe during a maintenance routine. The best approach to defeat the effects of condensation or crystallization is to install adequate insulation or heat tracing (steam or electrical). A flushing connection is no substitute for proper maintenance but will help to reduce/optimize the frequency of the maintenance routines.

## AURORA™

Aurora® is the innovative combination of the Eclipse® Guided Wave Radar and a Magnetic Level Indicator (MLI). The MLI indicator rail offers the Eclipse a highly visible level indication that may obsolete the need for local indicators. The integration of these two independent technologies provides an excellent redundancy in one integrated design. With Aurora® it is even possible to plan maintenance ahead. Maintenance becomes needed when build up in an installation has surpassed the allowable limit. Build up on the float inside the MLI cage will force it to sink deeper in the liquid while the measurement of the Eclipse will not see any build up until its both lead elements are completely clugged. In this way, the float will indicate a lower level versus the real level measured by the Eclipse. The degree of deviation between both read outs is a worthwhile tool to determine the real need for maintenance.

**For more details – consult bulletin BE 57-138.**

## CAGES

Eclipse can be built into cages as small as DN 50 / 2", depending on probe type. When a new cage is needed, it can be ordered together with the Eclipse. Magnetrol has a long tradition in offering cost effective cages. Magnetrol cages comply with PED regulations and are available with a wide variety of options.

Measuring span	30-610 cm (12-240") <sup>①</sup>
Materials of construction	Carbon steel or 316/316L (1.4401/1.4404) stainless steel
Process connection sizes	1", 1 1/2", 2"
Process connection ratings	150#-2500# ASME
Configurations	Side-Side and Side-Bottom
Process pressures	Up to 431 bar (6250 psi) <sup>①</sup>
Process temperatures	Up to +425 °C (+800 °F) <sup>①</sup>

<sup>①</sup> Limitations are defined per selected GWR probe.

**For more details – consult bulletin BE 57-140.**

## SELECTION GUIDE

### Large coaxial GWR probes for clean liquids

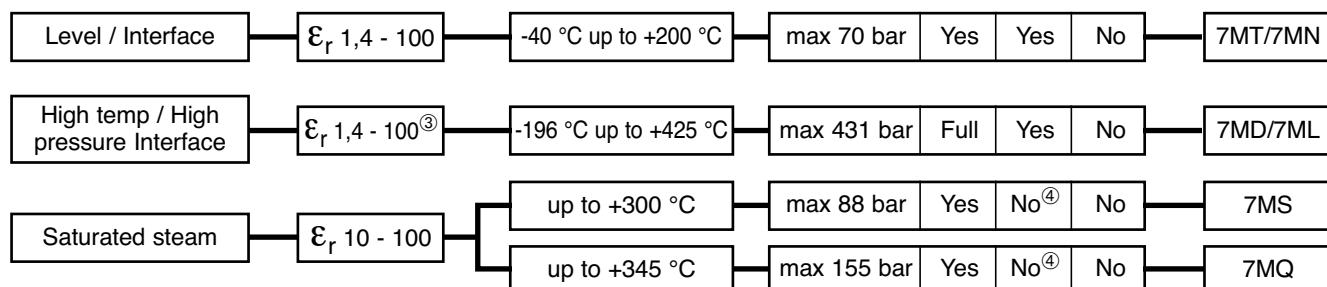

The large diam. GWR probes can be generally used for most applications. They can be installed directly in the tank as well as in by-pass cages, schedule pipe stillwells or bridles. Its more rugged construction allows eliminating spacers in applications where higher risk of build exists.

### Cage GWR probe for dirty liquids

The cage GWR probe is a single rod GWR probe which uses an existing or new cage, bridle or schedule pipe stillwell to re-create the same propagation of signal of a coaxial GWR probe. Cage GWR probes are suited for 2", 3" or 4" size diam. and use an impedance matching part that aligns in the same way with the characteristic impedance of a standard coaxial style GWR probe. Cage GWR probes are overfill safe and offer the same performance of coaxial GWR probes.

Application	Dielectric limit	Temperature limits	Pressure	Applications			GWR Probe
			Vacuum ①	Overfill safe	Foam ②		

#### Coaxial GWR probes - max viscosity 2000 mPa.s (cP) (except 7MS: max 500 mPa.s (cP))

#### Cage GWR probe - max viscosity 10.000 mPa.s (cP)

### MODEL 705/706 ADAPTOR

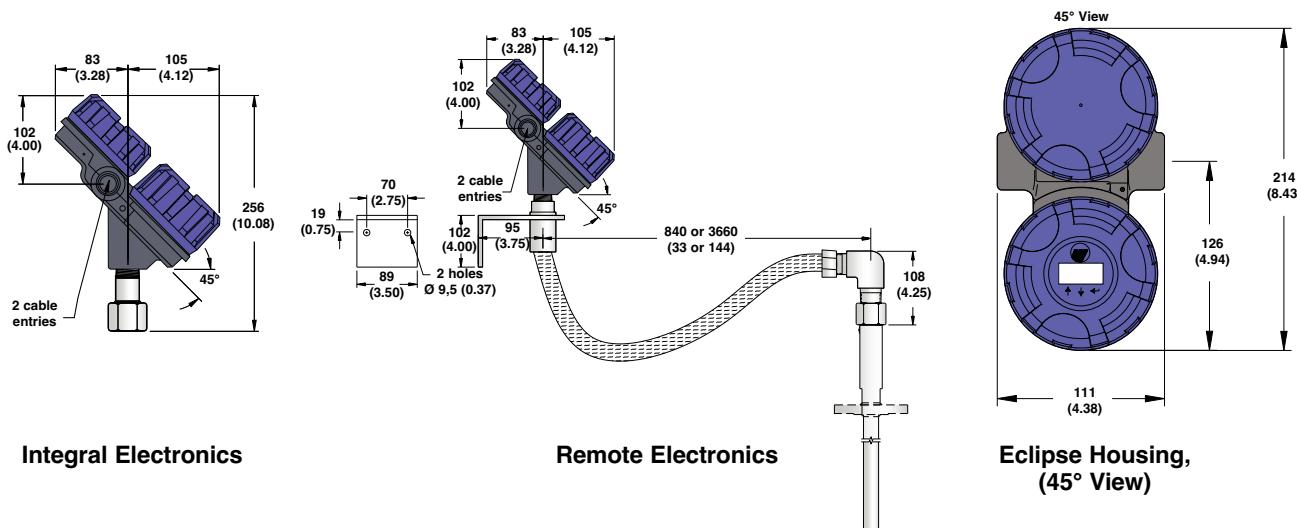

The latest generation Model 706 GWR transmitter is now available with an adapter that will enable operation with legacy Model 705 HART® transmitters probes.

Installed in between the Model 706 transmitter and an existing, installed Model 705 probe, this unique accessory allows one to easily obtain all of the performance advantages, proactive diagnostics, and user-friendly configuration of the latest generation Model 706!

**For more details – consult bulletin BE 57-106**

- ① Each Eclipse probe can be used for vacuum service (negative pressure) but only the Borosilicate GWR probes (7MD/7ML) are suited for full vacuum conditions (Helium leak < 10<sup>-8</sup> cc/s @ 1 bar abs.)
- ② Eclipse is ideally suited to be used on foaming applications but in specific conditions where dense foam can enter/hydrate in the stilling well, coaxial GWR probes are not recommended.
- ③ Depending spacer. See model selection 7MD/7ML GWR probe.
- ④ Consult factory for overfill applications.

## DIMENSIONS in mm (inches)

### EXPEDITE SHIP PLAN (ESP)

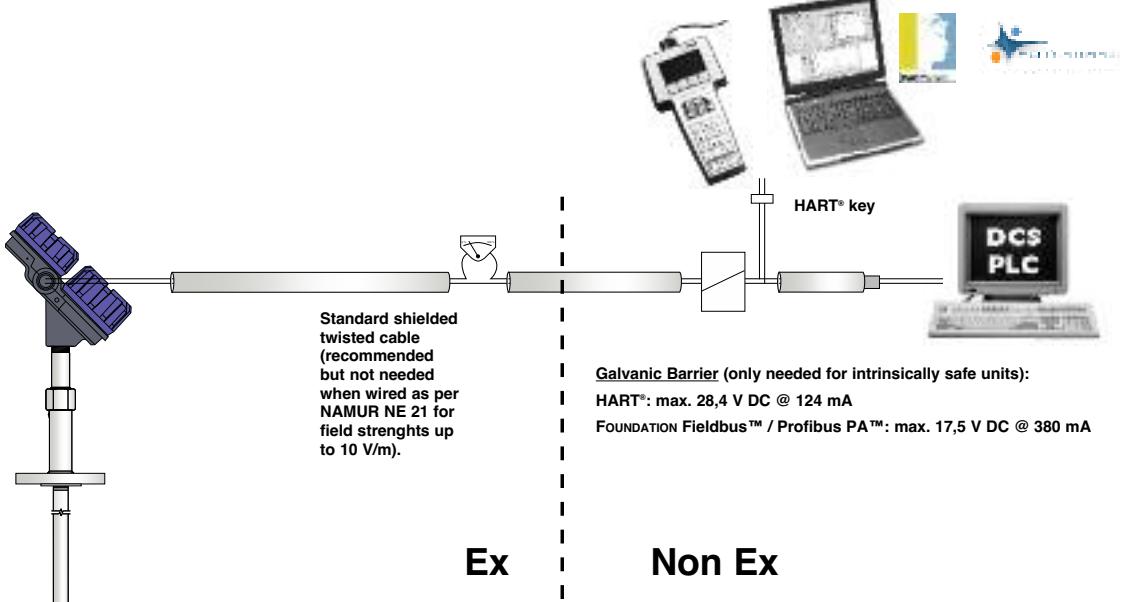

Several models are available for quick shipment, within max. 4 weeks after factory receipt of purchase order, through the Expedite Ship Plan (ESP). To take advantage of ESP, simply match the blue model number codes.  
ESP delivery is limited to a maximum of 10 units per order. Contact your local representative for lead times on larger volume orders, as well as other products and options.

## SELECTION DATA

A complete measuring system consists of:

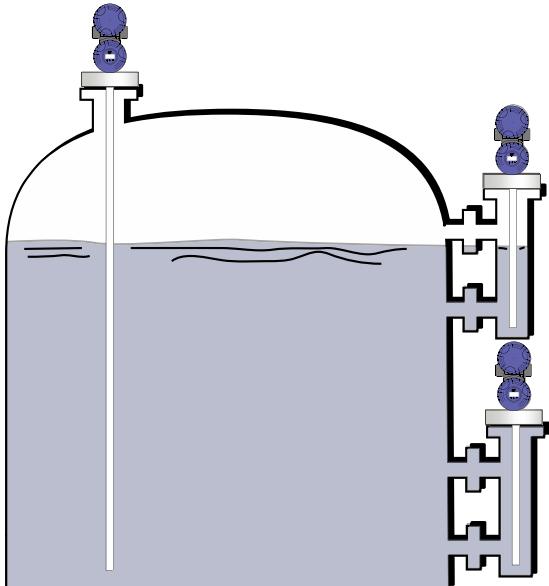

1. Eclipse transmitter head/electronics
2. Eclipse 705 GWR probe
3. Free of charge: Eclipse 705 DTM (PACTware™) can be downloaded from [www.magnetrol.com](http://www.magnetrol.com).
4. Option: MACTek Viator USB HART® interface: order code: **070-3004-002**

## ELECTRICAL WIRING

## MOUNTING – 7MT/7MN

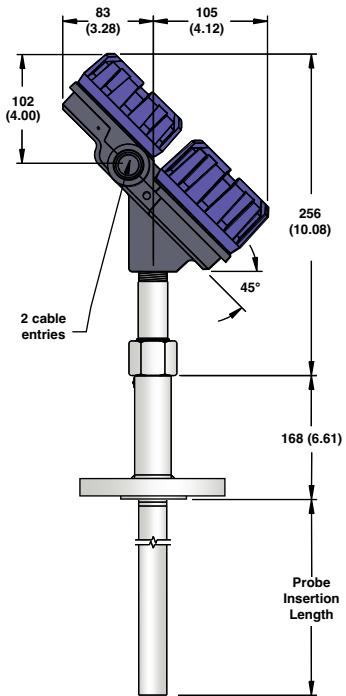

### Overfill safe and Overfill proof

Eclipse 7MT and 7MN coaxial type GWR probes are “**Overfill safe**” in use and “**Overfill proof**” certified.

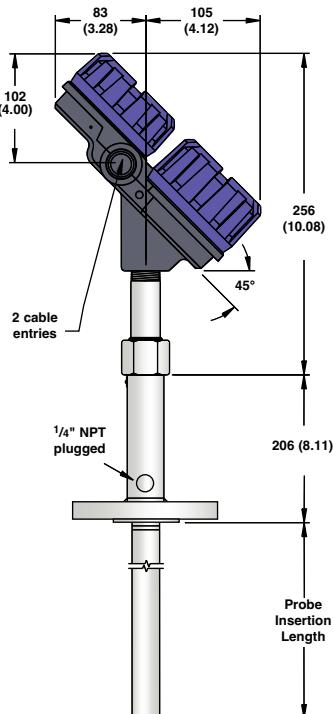

**Overfill safe** means that the unit is capable to measure up to the process connection. Units with “non overfill safe” probes use software to ignore level readings in the blocking distance or transitioning zone. When level rises too high in this zone, the unit may consider the end of probe reflection as the real level and may report an empty vessel instead of an overfilling vessel.

**Overfill proof** protection (such as WHG or VLAREM) certifies reliable operation when the transmitter is used as overfill alarm but assumes that the installation is designed in such way that the vessel/ cage cannot overfill.

## PERFORMANCE

<b>Description</b>		<b>Specification</b>	
Reference Conditions with a 1,8 m (72") coaxial type GWR probe		Reflection from liquid, with dielectric in center of selected range, at +20 °C (70 °F) with CFD threshold <sup>①</sup>	
Linearity		< 0,1 % of probe length or 2,5 mm (0.1"), whichever is greater	
Accuracy <sup>②</sup>	Level measurement	< 0,1 % of probe length or 2,5 mm (0.1"), whichever is greater	
	Interface measurement	± 25 mm (1")	
Resolution		± 2,5 mm (0.1")	
Repeatability		< 2,5 mm (0.1")	
Hysteresis		< 2,5 mm (0.1")	
Response Time		< 1 second	
Warm-up Time		< 5 seconds	
Ambient Temp.		-40 °C to +80 °C (-40 °F to +175 °F) -20 °C to +70 °C (-5 °F to +160 °F) -40 °C to +70 °C (-40 °F to +160 °F) -20 °C to +70 °C (-5 °F to +160 °F)	– blind transmitter – with digital display – for Ex ia and Ex d[ia] with blind transmitter – for Ex ia and Ex d[ia] with digital display
Process Dielectric Effect		< 7,5 mm (0.3") within selected range	
Operating Temp. Effect		Approx. +0,02 % of probe length/°C for probes ≥ 2,5 m (8') <sup>③</sup>	
Humidity		0-99 %, non-condensing	
Electromagnetic Compatibility		Meets CE requirements (EN 61326: 1997 + A1 + A2) and NAMUR NE 21	

## PROBE SPECIFICATIONS

<b>Description</b>			<b>7MD/7ML: high pressure / high temperature GWR probe</b>
Materials	Probe	316/316L (1.4401/1.4404), Hastelloy® C (2.4819) or Monel® (2.4360)	
	Process seal	Borosilicate / Inconel® X-750	
	Spacers	PEEK	
Probe diameter	Stainless steel	Inside rod 16 mm (0.63") – outer tube 45 mm (1.75")	
	Hast. C / Monel®	Inside rod 16 mm (0.63") – outer tube 49 mm (1.93")	
Mounting		External cage and/or in-tank mounting	
Process Connection		Flanged: various ASME, EN or torque tube mating flanges	
Probe length		From 60 cm to 610 cm (24" to 240")	
Transition Zone <sup>④</sup>	Top	0 mm (0")	
	Bottom	Er: 1,4 = 150 mm (6") / Er: 80 = 25 mm (1")	
Process Temp. <sup>⑤</sup>	Max	+345 °C @ 324 bar (+650 °F @ 4700 psi)	
	Min	-196 °C @ 138 bar (-320 °F @ 2000 psi)	
Max. Process Pressure <sup>⑤</sup>		431 bar @ +20 °C (6250 psi @ +70 °F)	
Max. Viscosity		2000 mPa.s (cP)	
Dielectric Range	Level	Probes ≤ 2,5 m: Er ≥ 1,4 with single bottom spacer Probes > 2,5 m: Er ≥ 1,7	
	Interface	Upper liquid: Er ≥ 1,4 or 1,7 (see above) and ≤ 5 Lower liquid: Er ≥ 15	
Vacuum service		Full vacuum (Helium leak < 10 <sup>-8</sup> cc/s @ 1 atmosphere vacuum)	
Media coating		In case of media coating, select 7ML probe	

<sup>①</sup> May degrade for 7MD/7ML probe or with fixed threshold.

<sup>②</sup> Accuracy may degrade when using compensation.

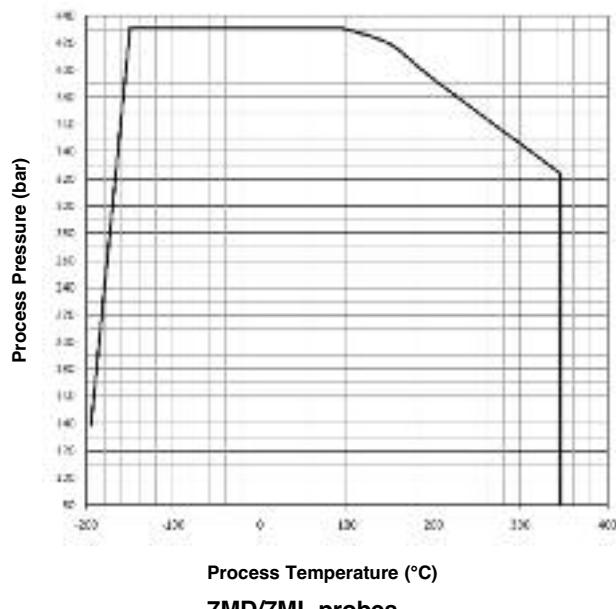

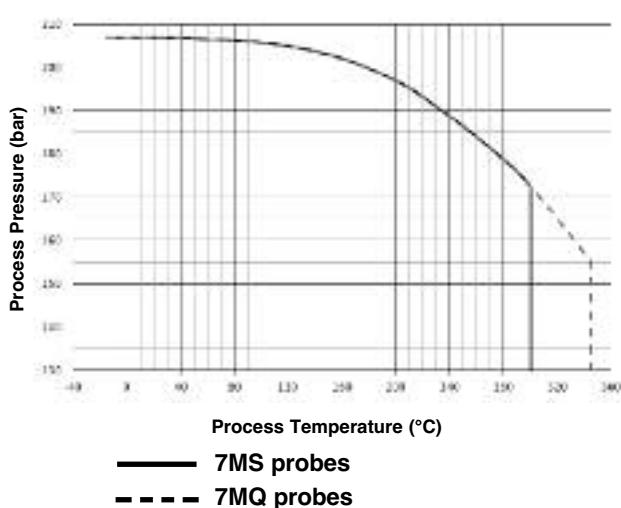

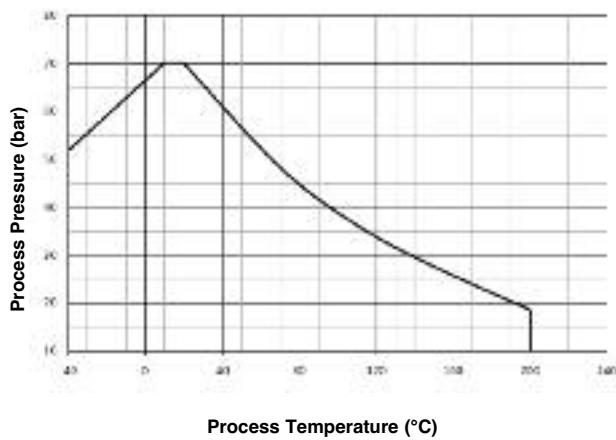

<sup>③</sup> Accuracy may degrade slightly < 2,5 m (8')

<sup>④</sup> Transition Zone (zone with reduced accuracy) is dielectric dependent; Er = dielectric permittivity. It is recommended to set 4-20 mA signal outside transition zones.

<sup>⑤</sup> See graphs at page 19.

# TEMPERATURE-PRESSURE RATING FOR ECLIPSE PROBE SEALS

## QUALITY ASSURANCE - ISO 9001

THE QUALITY ASSURANCE SYSTEM IN PLACE AT MAGNETROL GUARANTEES THE HIGHEST LEVEL OF QUALITY DURING THE DESIGN, THE CONSTRUCTION AND THE SERVICE OF CONTROLS.  
OUR QUALITY ASSURANCE SYSTEM IS APPROVED AND CERTIFIED TO **ISO 9001** AND OUR TOTAL COMPANY IS COMMITTED TO PROVIDING FULL CUSTOMER SATISFACTION BOTH IN QUALITY PRODUCTS AND QUALITY SERVICE.

## PRODUCT WARRANTY

ALL MAGNETROL ELECTRONIC AND ULTRASONIC LEVEL CONTROLS ARE WARRANTED FREE OF DEFECTS IN MATERIALS AND WORKMANSHIP FOR ONE FULL YEAR FROM THE DATE OF ORIGINAL FACTORY SHIPMENT. IF RETURNED WITHIN THE WARRANTY PERIOD; AND, UPON FACTORY INSPECTION OF THE CONTROL, THE CAUSE OF THE CLAIM IS DETERMINED TO BE COVERED UNDER THE WARRANTY; THEN, MAGNETROL INTERNATIONAL WILL REPAIR OR REPLACE THE CONTROL AT NO COST TO THE PURCHASER (OR OWNER) OTHER THAN TRANSPORTATION.  
MAGNETROL SHALL NOT BE LIABLE FOR MISAPPLICATION, LABOR CLAIMS, DIRECT OR CONSEQUENTIAL DAMAGE OR EXPENSE ARISING FROM THE INSTALLATION OR USE OF THE EQUIPMENT. THERE ARE NO OTHER WARRANTIES EXPRESSED OR IMPLIED, EXCEPT, SPECIAL WRITTEN WARRANTIES COVERING SOME MAGNETROL PRODUCTS.
